

The Data displayed here is based on the European Union Agency for Fundamental Rights (FRA) LGBTI Survey Data Explorer & EU-LGBTI II (2019) Survey Report "A long way to go for LGBTI equality" Published on May 14<sup>th</sup> 2020

# INTERSEX PEOPLE FACE MEDICAL INTERVENTIONS *WITHOUT FULL CONSENT!*

62%

of intersex survey respondents that were subjected to surgery say they did not provide – and were not asked for – their own or their parents' fully informed consent before their first surgical intervention to modify their sex characteristics. – FRA EU LGBTI II Report

49%

Almost half of those intersex respondents say that fully informed consent was not provided for hormonal treatment, or for any other type of medical treatment. – FRA EU LGBTI II Report

*Medical interventions without personal, prior, persistent & fully informed consent are a violation of bodily integrity and self-determination and of human rights*

62% 49%

*Intersex?  
Pathologization?  
Sex Characteristics?*

**Intersex individuals** are born with sex characteristics that do not fit the typical definition of male or female. This can become apparent at birth or later in life.

**Pathologization** is the practice to frame something undesirable in an individual or social body and as a disease or disorder, even without a vital medical necessity

**Sex Characteristics** are describing the sexual anatomy, reproductive organs, hormonal structure and/or levels and/or chromosomal patterns of a person
